

## Rescheduling Immunizations

The patient's Immunization Schedule can be edited when, for example, they receive immune globulin. In this case, their measles vaccine must be delayed for 6 months to ensure adequate immune response.

1. Select **Immunization Schedule** from the **Menu** in PowerChart.
2. In the **Due Date** column, right-click the next available dose of MMR vaccine and select **Chart**.

3. The Document Immunization Administration window displays. In the **Exception** field select **Contraindicated - Reschedule**.
4. In the **Exception Reason** field, select **Temporary contraindication - reschedule**.
5. Include a description of the reschedule as the **Contraindication Description** and select the next available **Reschedule Date**.

6. Click **Chart**.

The next available **Due Date** has now changed:
