"Embarrassed Airway" Terminology Clarified
We have improved our approach to highlighting that a patient has been Difficult to Intubate or Difficult to Bag-mask. To accomplish this, we will be updating the ICD10 code of "Embarrassed Airway" to more intuitive labels.

The difficult airway rules will be triggered when a provider documents Yes in one of the difficult airway fields in the intubation PowerForm or post-anesthesia assessment:

Expected difficult intubation and/or Difficult Mask Airway will automatically be added to the Problem List:

The problems are also displayed in the Critical Management Info section in Clinical Highlights:
