

# Vascular Access Update

## March 8, 2012

January 2012, the new field **Insert/Begin Use Date** was created and the **Insertion Time** was removed from IView.

Central Venous Line #1	<input checked="" type="checkbox"/>		
CV Line #1 Insert/Begin Use Date	Mark Mark Mark		

- Done to ease insertion documentation when the line was placed in the OR, at an outside facility or a previous encounter (PICC or Hickman/Broviac).
- Nurses did not want to document time when they were not present for the actual insertion.
- Line Days is calculated based on the **Insert/Begin Use Date**.
- The **Indwelling Devices Tab** displays the Line Day beginning at Midnight. The Indwelling Devices Tab also displays the last documented cap change and dressing change date/times.
- System is not able to recognize that a line was **Placed, Removed** and **Replaced** on the same calendar day.

### For Example:

- UVC is **Placed** on 3/2 at 0800 identified as **CVL #1**.
- This UVC (CVL#1) is **Removed** at 0900. Documentation of the line removal is done in the **Removal Date/Time field**.

Date/Time-Cap Change CV Line #1	IT	UI	#2
Type of CV Line #1	Umbilical...		
Non-Tunneled CV Line #1 Activity	Removal		
UVC CV Line #1 Activity			
Site Condition of CV Line #1			
Type of dressing applied CV Line #1			
<b>*Date/time of removal of CV Line #1</b>	Mark Mark Mark		
CV Line #1 Site Removal WDI			
CV Line #1 Catheter Removal WDL			
<b>*CV Line #1 Reason for Removal</b>			

- **Replaced** with a PICC @ 1500. **CANNOT be identified as CVL #1**.
- CVL #1 can be used again on the **Next calendar day** (3/3 in our example).
