Who do I call?

Determining which provider is caring for your patient

The hospitalist groups have recently been looking at the challenges encountered by staff when trying to determine the responsible provider for a given patient at a given time. In order to help they are working on identifying themselves in the chart on a shift by shift basis. This will provide a current contact when questions or needs arise.

For the day and evening shifts, the current provider can be found on the Clinical Summary. In the Clinical Highlights section under Inpatient Demographics, the Current Attending will be listed.
