

## Nurses asked – We answered: Safety checks documentation now in iView core assessment

Nurses from various care communities have requested a location to document safety checks done at the **beginning of the shift**. Several areas have provided feedback in the design.

Beginning October 21<sup>st</sup>, a new section called **Safety Checks**, will appear on Core Assessment iView Bands. The existing Safety Checklist within the Neonatal Core Assessment Band will be replaced. **Safety Checks** is the very first section in all Core Assessment Bands.

This checklist is designed to be used at the **beginning of the shift by the on-coming RN** to ensure basic safety concerns are addressed for each patient.
