OVERVIEW
Children’s Minnesota provides a complete array of highly specialized care for children from infancy to 21 years and older with vascular anomalies. By coordinating the experts from several specialties into a multidisciplinary team, families experience a new level of convenience in an environment focused exclusively on pediatrics.

COMPREHENSIVE DIAGNOSTIC SERVICES
With vascular anomalies, each diagnosis is unique — and so is the treatment, whether it involves medical care, surgical care or both. The vascular anomalies center treats children from early stages of diagnosis and treatment through a complete follow-up plan that involves the region’s leading pediatric expertise at Children’s Minnesota.

- Diagnosis
- Evaluation
- Second opinion
- Treatment
- Ongoing consultation to primary care and specialty physicians
- Access to Children’s and community resources
- Insurance coverage information
- Complete post-treatment follow-up

Vascular Anomalies Center
Children’s Specialty Center
Suite 175
2530 Chicago Avenue South
Minneapolis, MN 55404
INTERDISCIPLINARY TEAM

The Vascular Anomalies Center is composed of an experienced, multidisciplinary team of pediatric physicians. They have extensive experience with vascular anomalies in children and understand the needs of their families.

The disciplines they represent include:
- Anesthesiology
- General surgery
- Hematology
- Interventional radiology
- Orthopedic surgery
- Otolaryngology
- Otorhinolaryngology
- Pathology
- Pediatrics
- Plastic surgery
- Pulmonary medicine
- Vascular radiology
- Vascular surgery

In addition to physicians, the pediatric nurses, technicians and other caregivers in the center provide pediatric-focused expertise to patients and their families, and ensure that all aspects of care are well-organized and coordinated. Families benefit from the full complement of pediatric services for which Children’s staff is well known, including social work, child life, nutrition and psychology.

TREATMENT

Today’s successful treatment plans may include a more aggressive approach, thanks to advances in diagnosis and treatment technology, and early intervention. Our goal is to treat your child’s anomaly using the least invasive treatments possible. Children’s Minnesota provides national expertise in several treatments, including:

- Cooled tip pulse dye laser
- Pharmacological management, including Propranolol and Sirolimus
- Surgical procedures performed by a variety of specialty surgeons
- Interventional radiology skilled in sclerotherapy and other techniques that reduce the size of the vascular malformation
