Lab Dept: Chemistry

Test Name: 7-DEHYDROCHOLESTEROL

General Information

Lab Order Codes: 7DEH

Synonyms: Smith-Lemli-Opitz Screen, RSH syndrome, 8-dehydrocholesterol

CPT Codes: 82542 – Column includes mass spectometry, if performed, none drug analyte(s) not elsewhere specified, qualitative or quantitative, each specimen

Test Includes: 7-dehydrocholesterol level reported as positive or negative. Quantitative results are provided when positive.

Logistics

Test Indications: Useful in diagnosing Smith-Lemli-Opitz (SLO) Syndrome (3 beta-hydroxysterol-delta 7-reductase deficiency).

Lab Testing Sections: Chemistry – Sendouts

Referred to: Mayo Medical Laboratories (MML Test: SLO)

Phone Numbers: MIN Lab: 612-813-6580

STP Lab: 651-220-6550

Test Availability: Daily, 24 hours

Turnaround Time: Varies, test performed 1 day per week (3 - 9 days)

Special Instructions: Deliver to lab as soon as possible, must be processed within 45 minutes of collection. See Patient Preparation

Specimen

Specimen Type: Blood

Container: Green top (Lithium heparin) tube
Alternate: Green (Na Heparin) or Lavender (EDTA)

Draw Volume: 3 mL (Minimum: 0.6 mL) blood
**Processed Volume:** 1 mL (Minimum: 0.2 mL) plasma

**Collection:** Routine venipuncture. Mix specimen thoroughly by gentle inversion.

**Special Processing:** Lab Staff: Centrifuge within 45 minutes of collection, separate and freeze plasma. Store and ship frozen in a plastic vial. Forward promptly.

**Patient Preparation:** 12 or more hour fasting specimen preferred (infants before next feeding).

**Sample Rejection:** Mislabeled or unlabeled specimens

---

**Interpretive**

**Reference Range:** Negative (if positive, quantitative results are provided)

Interpretation: Elevated plasma concentrations of 7- and 8-DHC are highly suggestive of a biochemical diagnosis of SLO.

Mild elevations of these cholesterol precursors can be detected in patients with hypercholesterolemia and patients treated with haloperidol. However, the 7-DHC to cholesterol ratio is only elevated in SLO patients.

**Critical Values:** N/A

**Limitations:** Cholesterol screening tests are unreliable for diagnosis for Smith-Lemli-Opitz syndrome

Aripiprazole and trazodone cause false elevations in 7-dehydrocholesterol.

**Methodology:** Gas Chromatography/Mass Spectrometry (GC/MS)
