Lab Dept: Coagulation

Test Name: HEPARIN ASSAY, UNFRACTIONATED

General Information

Lab Order Codes: HEPU (unfractionated heparin)
Synonyms: Anti-Xa Assay
CPT Codes: 85520 – Heparin assay
Test Includes: Heparin level reported in IU/mL.

Logistics

Lab Testing Sections: Coagulation
Phone Numbers: MIN Lab: 612-813-6280
STP Lab: 651-220-6550
Test Availability: Daily, 24 hours
Turnaround Time: 2 hours
Special Instructions: Do Not draw through a heparinized line.

Specimen

Specimen Type: Whole blood
Container: Light Blue top (Buffered Na Citrate 3.2%) tube
Draw Volume: 1.8 mL or 2.7 mL blood
Processed Volume: 0.9 mL (Minimum: 0.5 mL) plasma
Collection:
- A clean venipuncture is essential, avoid foaming.
- Entire sample must be collected with a single collection, pooling of sample is unacceptable.
- Capillary collection is unacceptable.
- Patient's with a hematocrit level >55% must have a special tube made to adjust for the hematocrit; contact laboratory for special tube.
- Mix thoroughly by gentle inversion. Deliver immediately to the laboratory at room temperature via courier or pneumatic tube.

Off campus collection:
- Must be tested within 30 minutes of collection.
- Do not refrigerate.
- If not received in our lab within 30 minutes of collection, sample must be centrifuged and platelet-poor plasma removed from cells and transferred to an aliquot tube. Plasma must be received in lab within 4 hours of collection or frozen at 20°C and delivered to lab on dry ice within 2 weeks.

*Validation of your lab's centrifuge for platelet poor plasma is required.*

Special Processing:
Lab Staff: Samples should be centrifuged within 1 hour of collection. Remove plasma, store in a plastic screw top vial. Send frozen if testing will not be completed within 4 hours.

Patient Preparation: None

Sample Rejection: Improper tube; clotted specimens; underfilled tubes; hemolyzed specimens; mislabeled or unlabeled specimens

**Interpretive**

**Reference Range:**
- Normal: <0.01 IU/mL (patient not on heparin)
- Therapeutic Range: 0.3 to 0.7 IU/mL

**Critical Values:**
- >1.00 IU/mL

**Limitations:**
The test cannot distinguish between unfractionated and low molecular weight heparin. The correct assay must be requested for the type of heparin the patient is receiving or the results will be off by a factor of 2 to 3. The plasma cannot be treated for heparin removal.

**Methodology:**
Chromogenic Anti-Xa

**Updates:**

9/15/2015: Added Off Campus collection info.
3/10/2015: Special processing update, previously 30 minutes.
