Lab Dept: Coagulation

Test Name: PROTIME AND INR

**General Information**

Lab Order Codes: PT

Synonyms: PT; Protome; Prothrombin Time and INR

CPT Codes: 85610 - Prothrombin time

Test Includes: PT reported in seconds and INR

**Logistics**

Test Indications: Useful for evaluating the extrinsic and common pathways of the coagulation system; aid in screening for congenital deficiencies of factors II, V, VII, and X, dysfibrinogenemia, afibrinogenemia, Coumadin effect, liver disease, disseminated intravascular coagulation (DIC), and vitamin K deficiency.

Lab Testing Sections: Coagulation

Phone Numbers: MIN Lab: 612-813-6280

STP Lab: 651-220-6550

Test Availability: Daily, 24 hours; Testing performed at Minneapolis and St. Paul Laboratories.

Turnaround Time: 2 hours

Special Instructions: Deliver immediately to the Laboratory

**Specimen**

Specimen Type: Whole blood

Container: Light Blue top (Buffered Na Citrate 3.2%) tube

Draw Volume: 1.8 mL blood (in 2 mL tube) or 2.7 mL blood (in a 3 mL tube).

Processed Volume: Minimum: 0.9 mL plasma
**Collection:**
- A clean venipuncture is essential, avoid foaming.
- Entire sample must be collected with single collection, pooling of sample is unacceptable.
- Capillary collection is unacceptable.
- Patient’s with a hematocrit level >55% must have a special tube made to adjust for the hematocrit; contact lab for a special tube.
- Mix thoroughly by gentle inversion. Deliver immediately to the laboratory at room temperature via courier or pneumatic tube.

**Off campus collections:**
- Must be tested within 24 hours.
- Do not refrigerate.
- If not received in our lab within 24 hours of collection, sample must be centrifuged and *platelet-poor plasma removed from cells and transferred to an aliquot tube. Freeze at -20°C and deliver to the lab on dry ice within 2 weeks.
  *Validation of your lab’s centrifuge for platelet poor plasma is required.*

**Special Processing:**
Lab staff: Centrifuge in Stat Spin for 5 minutes or 10 minutes at 3000 rpm at room temperature. For primary tube testing, leave plasma on cells OR remove plasma and place in a 4 mL plastic cup; allow for 100 uL of dead space.

Test within:
- Twenty-four (24) hours when stored as plasma remaining in the capped tube above the packed cells 18 to 24°C, centrifuged or not.
- Two (2) weeks when stored -20°C.
- Six (6) months when stored -70°C (rapidly frozen).
- Plasma must be frozen if testing cannot be completed within four (24) hours.
- Frozen plasmas are thawed at 37°C for three (3) minutes, test immediately.

**Patient Preparation:**
None

**Sample Rejection:**
Improper tube; clotted specimen; under-filled tubes; mislabeled or unlabeled specimens

---

**Interpretive**

<table>
<thead>
<tr>
<th>Reference Range:</th>
<th>Test</th>
<th>All ages</th>
</tr>
</thead>
<tbody>
<tr>
<td>PT:</td>
<td>8.7 – 12.4 seconds</td>
<td></td>
</tr>
<tr>
<td>INR:</td>
<td>0.8 – 1.20</td>
<td></td>
</tr>
</tbody>
</table>

Note: Extremely high results will be reported as PT >90.0, INR >9.0
**Critical Values:**

PT: >17.0 seconds

INR: >1.7

**Limitations:**

N/A

**Methodology:**

Timed, Clot-based assay

**References:**

**Updates:**

2/17/2005: Critical value for INR previously listed as >1.5.
7/19/2006: Removed statement, "Do not transport by pneumatic tube".
1/30/2008: Edited reference ranges: PT previously reported as: 10.6 – 15.5 seconds, critical value previously reported as: >21.2
8/19/2013: Updated specimen stability information.
9/25/2014: Added Off Campus collection info
7/11/2023: Updated reference range to match linearity of instrument, methodology.
7/18/23: Updated testing performed at both MPLS and STP locations. Removed ref ranges for Coumadin therapy, they are listed in the WPT.
