General Information

Lab Order Codes: HHV6A

Synonyms: Herpes Virus-6 Human IgG and IgM Antibodies

CPT Codes: 86790 x2 – Antibody; virus, not elsewhere specified

Test Includes: HHV6 IgG and IgM Antibody titers.

Logistics

Test Indications: Human herpesvirus 6 (HHV-6) infects peripheral blood leukocytes, and is considered the agent of roseola. The normal prevalence of HHV-6 antibody is high; nearly 100% of the population will demonstrate antibody at midlife with titers declining in old age. Immunofluorescence assays are used for serological detection of HHV-6. Crossreactions with other Herpes viruses, i.e., Cytomegalovirus and Herpes Simplex have not been found. In order to demonstrate primary infection, it is necessary to detect a significant change in titer.
