Interpretive

Reference Range:

Negative

Interpretation: A positive value is consistent with an neuromyelitis optica spectrum disorder (NMOSD) and justifies initiation of appropriate immunosuppressive therapy at the earliest possible time. This allows early initiation and maintenance of optimal therapy. Recommend follow-up in 6 months if NMOSD is suspected. The autoantibody is not found in healthy subjects.

Critical Values:

N/A

Limitations:

A negative result does not exclude a diagnosis of neuromyelitis optica spectrum disorder (NMOSD).

Methodology:

Flourescence-Activated Cell Sorting (FACS)
