PATIENTS REQUIRING IRRADIATED BLOOD PRODUCTS

- Documented or suspected, acquired or congenital immunodeficiency disorders. Human Immunodeficiency Virus (HIV) positive patients are an exception and **DO NOT** require irradiated blood products.
- Infants <4 months old through out that admission period.
- Therapy induced immunosuppression (aggressive chemotherapy, immunotherapy, or extensive radiation therapy).
- Granulocyte concentrates/buffy coats.
- Directed donations from blood relatives.
- HLA-matched apheresis platelets/crossmatch compatible platelets.
